	Examiner Harry B. Tanner	Art Unit 3744	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 23 December 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over admitted prior art in view of Manohar et al. The admitted prior art refrigeration cycle shown in Figures 4 and 5 and described on pages 1-9 of the specification is the same as the claimed invention with the exception of the auxiliary cooling circuit and gas cooler being cooled by the same cooling fluid in the same housing in a series flow arrangement rather being cooled by the same cooling fluid in the same housing in a parallel flow arrangement as shown in Figure 5. Manohar teaches the use of the same cooling fluid 238 cooling both the gas cooler 224b and the auxiliary cooling circuit 224a in which the gas cooler is upstream of the auxiliary cooling circuit in a series arrangement (see Figure 4). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the admitted prior art refrigeration cycle such that it included the use of the same cooling fluid for cooling both the gas cooler and the auxiliary cooling circuit in the same housing in a series arrangement in view of the teachings of Manohar. The location of the gas cooler downstream of the auxiliary cooling circuit would have been obvious to one of ordinary skill in the art since the cooling of both heat exchangers occurs with either arrangement.

Applicant's arguments filed on December 23, 2005 have been fully considered but are moot in view of the new ground(s) of rejection.
